This plugin was written to help the implementation of DOTween methods with Playmaker by using actions! We are always open to hearing your ideas for improvements, suggestions and problems. Email us any time at doozy.entertainment@gmail.com

Make sure to check out the example scene in the DOTweenPlaymakerActions/Examples/_Scenes folder in the package!

SOLUTIONS! PLAYMAKER ACTIONS FOR DOTWEEN SOLVE THE FOLLOWING PROBLEMS

- The need to use DOTween methods with a Playmaker State Machine in a fast and reliable manner
- Easy search for all the possible actions you can accomplish with DOTween and DOTween Pro

QUICK START: HOW TO SETUP YOUR SCENE TO UTILIZE PLAYMAKER ACTIONS FOR DOTWEEN

- **IMPORTANT:** Import [Playmaker](#) before importing this package.
- **IMPORTANT:** Import and setup [DOTween](#) or [DOTween Pro](#) before importing this package.
- **VERY IMPORTANT:** Make sure you have at least DOTween version v 1.1.060 → If you don't, go to <http://dotween.demigiant.com/download.php> and get it.
- Import DOTween Playmaker Actions by Doozy from the Asset Store
- Look for the actions in the Playmaker Action Browser
- NOTE 1: if you are using DOTween Pro, add the additional actions by importing DOTweenPlaymakerActions/Actions/DOTweenPro_Actions.unity
- NOTE 2: if you are using DOTween Pro and TextMesh Pro, first import the DOTween Pro actions from NOTE 1, then add the TextMesh Pro additional actions by importing DOTweenPlaymakerActions/Actions/DOTweenPro/DOTween_TextMeshPro_Actions.unity

DOTWEEN ANIMATE COLOR

Animates a color variable to a target value.

Game Object Use Owner

Variable* None

To [Color Picker]

Set Relative ☐

Duration 0

Set Speed Based ☐

Start Delay 0

Reverse Options

Play In Reverse ☐

Set Reverse Relative ☐

Events

Start Event [Dropdown]

Finish Event [Dropdown]

Finish Immediately ☐

Tween ID

Set an ID for the tween, which can then be used as a filter with DOTween's Control Methods

Tween Id Type None

String As Id [Text Field]

Tag As Id [Text Field]

Ease Settings

Selected Ease Ease Type

Ease Type Linear

Animation Curve [Curve Editor]

Loop Settings

Setting loops to -1 will make the tween loop infinitely.

Loops 0

Loop Type Restart

Special Settings

Auto Kill On Completion ☒

Recyclable ☐

Update Type Normal

Is Independent Update ☐

Debug Options

Debug This ☐

GameObject – reference to a gameObject

Variable – The variable you want to animate

To – The end value you want to animate to

SetRelative – If setRelative is TRUE sets the tween as relative (the endValue will be calculated as startValue + endValue instead of being used directly). In case of Sequences, sets all the nested tweens as relative. IMPORTANT: Has no effect on Reverse Options, since in that case you directly choose if the tween isRelative or not in the settings below

Duration – The duration of the tween

SetSpeedBased – If isSpeedBased is TRUE sets the tween as speed based (the duration will represent the number of units/degrees the tween moves x second). NOTE: if you want your speed to be constant, also set the ease to Ease.Linear.

StartDelay – Set a delayed startup for the tween

REVERSE OPTIONS

PlayInReverse – Changes a TO tween into a FROM tween: sets the current target's startValue as the tween's endValue then immediately sends the target to the previously set endValue.

SetReverseRelative – If TRUE the FROM value will be calculated as relative to the current one

EVENTS

StartEvent – Playmaker Event to trigger when the tween starts

FinishEvent – Playmaker Event to trigger when the tween ends

FinishImmediately – If TRUE this action will finish immediately, if FALSE it will finish when the tween is complete.

TWEEN ID

TweenIdType – Select the source for the tween ID

StringAsId – Use a String as the tween ID

TagAsId – Use a Tag as the tween ID

EASE SETTINGS

SelectedEase – Select the source for the ease (ease type or animation curve)

EaseType – Sets the ease of the tween. If applied to a Sequence instead of a Tweener, the ease will be applied to the whole Sequence as if it was a single animated timeline. Sequences always have Ease.Linear by default, independently of the global default ease settings.

AnimationCurve – Set custom animation curve for the tween

LOOP SETTINGS

Loops – Number of loops. Setting loops to -1 will make the tween loop infinitely.

LoopType – Sets the looping options (Restart, Yoyo, Incremental) for the tween.

SPECIAL SETTINGS

AutoKillOnCompletion – If autoKillOnCompletion is set to TRUE the tween will be killed as soon as it completes, otherwise it will stay in memory and you'll be able to reuse it. (default TRUE)

Recyclable – Sets the recycling behaviour for the tween. If you don't set it then the default value (set either via DOTween.Init or DOTween.defaultRecyclable) will be used. (default FALSE)

UpdateType – Sets the type of update (Normal, Late or Fixed) for the tween and eventually tells it to ignore Unity's timeScale. UpdateType.Normal: Updates every frame during Update calls. UpdateType.Late: Updates every frame during LateUpdate calls. UpdateType.Fixed: Updates using FixedUpdate calls. (default UpdateType.Normal)

IsIndependentUpdate – If TRUE the tween will ignore Unity's Time.timeScale. NOTE: independentUpdate works also with UpdateType.Fixed but is not recommended in that case (because at timeScale 0 FixedUpdate won't run). (default FALSE)

DEBUG OPTIONS

DebugThis – Will print in the Debug.Log, the gameObject name this FSM is attached to, the FSM name and the State name that issued this action.

DOTWEEN ANIMATE FLOAT

Animates a float variable to a target value.

EVENTS

StartEvent – Playmaker Event to trigger when the tween starts

FinishEvent – Playmaker Event to trigger when the tween ends

FinishImmediately – If TRUE this action will finish immediately, if FALSE it will finish when the tween is complete.

TWEEN ID

TweenIdType – Select the source for the tween ID

StringAsId – Use a String as the tween ID

TagAsId – Use a Tag as the tween ID

EASE SETTINGS

SelectedEase – Select the source for the ease (ease type or animation curve)

EaseType – Sets the ease of the tween. If applied to a Sequence instead of a Tweener, the ease will be applied to the whole Sequence as if it was a single animated timeline. Sequences always have Ease.Linear by default, independently of the global default ease settings.

AnimationCurve – Set custom animation curve for the tween

LOOP SETTINGS

Loops – Number of loops. Setting loops to -1 will make the tween loop infinitely.

LoopType – Sets the looping options (Restart, Yoyo, Incremental) for the tween.

SPECIAL SETTINGS

AutoKillOnCompletion – If autoKillOnCompletion is set to TRUE the tween will be killed as soon as it completes, otherwise it will stay in memory and you'll be able to reuse it. (default TRUE)

Recyclable – Sets the recycling behaviour for the tween. If you don't set it then the default value (set either via DOTween.Init or DOTween.defaultRecyclable) will be used. (default FALSE)

UpdateType – Sets the type of update (Normal, Late or Fixed) for the tween and eventually tells it to ignore Unity's timeScale. UpdateType.Normal: Updates every frame during Update calls. UpdateType.Late: Updates every frame during LateUpdate calls. UpdateType.Fixed: Updates using FixedUpdate calls. (default UpdateType.Normal)

IsIndependentUpdate – If TRUE the tween will ignore Unity's Time.timeScale. NOTE: independentUpdate works also with UpdateType.Fixed but is not recommended in that case (because at timeScale 0 FixedUpdate won't run). (default FALSE)

DEBUG OPTIONS

DebugThis – Will print in the Debug.Log, the gameObject name this FSM is attached to, the FSM name and the State name that issued this action.

Animates a vector3 variable to a target value.

GameObject – reference to a gameObject

Variable – The variable you want to animate

To - The end value you want to animate to

SetRelative – If setRelative is TRUE sets the tween as relative (the endValue will be calculated as startValue + endValue instead of being used directly). In case of Sequences, sets all the nested tweens as relative. IMPORTANT: Has no effect on Reverse Options, since in that case you directly choose if the tween isRelative or not in the settings below

Duration – The duration of the tween

SetSpeedBased – If isSpeedBased is TRUE sets the tween as speed based (the duration will represent the number of units/degrees the tween moves x second). NOTE: if you want your speed to be constant, also set the ease to Ease.Linear.

StartDelay – Set a delayed startup for the tween

REVERSE OPTIONS

PlayInReverse – Changes a TO tween into a FROM tween: sets the current target's startValue as the tween's endValue then immediately sends the target to the previously set endValue.

SetReverseRelative – If TRUE the FROM value will be calculated as relative to the current one

EVENTS

StartEvent – Playmaker Event to trigger when the tween starts

FinishEvent – Playmaker Event to trigger when the tween ends

FinishImmediately – If TRUE this action will finish immediately, if FALSE it will finish when the tween is complete.

TWEEN ID

DOTWEEN AUDIO MIXER SET FLOAT

VIDEO EXAMPLE: DOTween Playmaker Actions – AudioMixer Example → https://www.youtube.com/watch?v=2rQf_JtHwv

Tweens an AudioMixer's exposed float to the given value. Note that you need to manually expose a float in an AudioMixerGroup in order to be able to tween it from an AudioMixer.

The screenshot shows the configuration window for the 'DOTween Audio Mixer Set Float' action. The window is divided into several sections:

- Game Object:** Set to 'Use Owner'.
- Audio Mixer:** A dropdown menu currently showing 'None (AudioMixer)'.
- Float Name*:** A text field with a red background and a dropdown arrow.
- To:** A numeric field set to '0'.
- Set Relative:** A checkbox that is currently unchecked.
- Duration:** A numeric field set to '0'.
- Set Speed Based:** A checkbox that is currently unchecked.
- Start Delay:** A numeric field set to '0'.
- Reverse Options:**
 - Play In Reverse:** A checkbox that is currently unchecked.
 - Set Reverse Relative:** A checkbox that is currently unchecked.
- Events:**
 - Start Event:** A dropdown menu.
 - Finish Event:** A dropdown menu.
 - Finish Immediately:** A checkbox that is currently unchecked.
- Tween ID:**
 - Set an ID for the tween, which can then be used as a filter with DOTween's Control Methods:** A text box.
 - Tween Id Type:** A dropdown menu set to 'None'.
 - String As Id:** A text field with a dropdown arrow.
 - Tag As Id:** A text field with a dropdown arrow.
- Ease Settings:**
 - Selected Ease:** A dropdown menu set to 'Ease Type'.
 - Ease Type:** A dropdown menu set to 'Linear'.
 - Animation Curve:** A dropdown menu.
- Loop Settings:**
 - Setting loops to -1 will make the tween loop infinitely.** A text box.
 - Loops:** A numeric field set to '0'.
 - Loop Type:** A dropdown menu set to 'Restart'.
- Special Settings:**
 - Auto Kill On Completion:** A checkbox that is checked.
 - Recyclable:** A checkbox that is unchecked.
 - Update Type:** A dropdown menu set to 'Normal'.
 - Is Independent Update:** A checkbox that is unchecked.
- Debug Options:**
 - Debug This:** A checkbox that is unchecked.

SetReverseRelative – If TRUE the FROM value will be calculated as relative to the current one

EVENTS

StartEvent – Playmaker Event to trigger when the tween starts

FinishEvent – Playmaker Event to trigger when the tween ends

FinishImmediately – If TRUE this action will finish immediately, if FALSE it will finish when the tween is complete.

TWEEN ID

TweenIdType – Select the source for the tween ID

StringAsId – Use a String as the tween ID

TagAsId – Use a Tag as the tween ID

EASE SETTINGS

SelectedEase – Select the source for the ease (ease type or animation curve)

EaseType – Sets the ease of the tween. If applied to a Sequence instead of a Tweener, the ease will be applied to the whole Sequence as if it was a single animated timeline. Sequences always have Ease.Linear by default, independently of the global default ease settings.

AnimationCurve – Set custom animation curve for the tween

LOOP SETTINGS

Loops – Number of loops. Setting loops to -1 will make the tween loop infinitely.

LoopType – Sets the looping options (Restart, Yoyo, Incremental) for the tween.

SPECIAL SETTINGS

AutoKillOnCompletion – If autoKillOnCompletion is set to TRUE the tween will be killed as soon as it completes, otherwise it will stay in memory and you'll be able to reuse it. (default TRUE)

Recyclable – Sets the recycling behaviour for the tween. If you don't set it then the default value (set either via DOTween.Init or DOTween.defaultRecyclable) will be used. (default FALSE)

UpdateType – Sets the type of update (Normal, Late or Fixed) for the tween and eventually tells it to ignore Unity's timeScale. UpdateType.Normal: Updates every frame during Update calls. UpdateType.Late: Updates every frame during LateUpdate calls. UpdateType.Fixed: Updates using FixedUpdate calls. (default UpdateType.Normal)

IsIndependentUpdate – If TRUE the tween will ignore Unity's Time.timeScale.

NOTE: independentUpdate works also with UpdateType.Fixed but is not recommended in that case (because at timeScale 0 FixedUpdate won't run). (default FALSE)

DEBUG OPTIONS

DebugThis – Will print in the Debug.Log, the gameObject name this FSM is attached to, the FSM name and the State name that issued this action.

Tweens a Camera's nearClipPlane.

SPECIAL SETTINGS

AutoKillOnCompletion – If autoKillOnCompletion is set to TRUE the tween will be killed as soon as it completes, otherwise it will stay in memory and you'll be able to reuse it. (default TRUE)

Recyclable – Sets the recycling behaviour for the tween. If you don't set it then the default value (set either via DOTween.Init or DOTween.defaultRecyclable) will be used. (default FALSE)

UpdateType – Sets the type of update (Normal, Late or Fixed) for the tween and eventually tells it to ignore Unity's timeScale. UpdateType.Normal: Updates every frame during Update calls. UpdateType.Late: Updates every frame during LateUpdate calls. UpdateType.Fixed: Updates using FixedUpdate calls. (default UpdateType.Normal)

IsIndependentUpdate – If TRUE the tween will ignore Unity's Time.timeScale.

NOTE: independentUpdate works also with UpdateType.Fixed but is not recommended in that case (because at timeScale 0 FixedUpdate won't run). (default FALSE)

DEBUG OPTIONS

DebugThis – Will print in the Debug.Log, the gameObject name this FSM is attached to, the FSM name and the State name that issued this action.

DOTWEEN LIGHT SHADOW STRENGTH

Changes the light's shadowStrength to the given one.

Debug Options

Debug This ☐

GameObject – reference to a gameObject with a Light Component attached.

To - The end value to reach

SetRelative – If setRelative is TRUE sets the tween as relative (the endValue will be calculated as startValue + endValue instead of being used directly). In case of Sequences, sets all the nested tweens as relative. IMPORTANT: Has no effect on Reverse Options, since in that case you directly choose if the tween isRelative or not in the settings below

Duration – The duration of the tween

SetSpeedBased – If isSpeedBased is TRUE sets the tween as speed based (the duration will represent the number of units/degrees the tween moves x second).

NOTE: if you want your speed to be constant, also set the ease to Ease.Linear.

StartDelay – Set a delayed startup for the tween

REVERSE OPTIONS

PlayInReverse – Changes a TO tween into a FROM tween: sets the current target's startValue as the tween's endValue then immediately sends the target to the previously set endValue.

SetReverseRelative – If TRUE the FROM value will be calculated as relative to the current one

EVENTS

StartEvent – Playmaker Event to trigger when the tween starts

FinishEvent – Playmaker Event to trigger when the tween ends

FinishImmediately – If TRUE this action will finish immediately, if FALSE it will finish when the tween is complete.

TWEEN ID

TweenIdType – Select the source for the tween ID

StringAsId – Use a String as the tween ID

TagAsId – Use a Tag as the tween ID

EASE SETTINGS

SelectedEase – Select the source for the ease (ease type or animation curve)

EaseType – Sets the ease of the tween. If applied to a Sequence instead of a Tweener, the ease will be applied to the whole Sequence as if it was a single animated timeline. Sequences always have Ease.Linear by default, independently of the global default ease settings.

AnimationCurve – Set custom animation curve for the tween

LOOP SETTINGS

Loops – Number of loops. Setting loops to -1 will make the tween loop infinitely.

LoopType – Sets the looping options (Restart, Yoyo, Incremental) for the tween.

SPECIAL SETTINGS

AutoKillOnCompletion – If autoKillOnCompletion is set to TRUE the tween will be killed as soon as it completes, otherwise it will stay in memory and you'll be able to reuse it. (default TRUE)

Recyclable – Sets the recycling behaviour for the tween. If you don't set it then the default value (set either via DOTween.Init or DOTween.defaultRecyclable) will be used. (default FALSE)

UpdateType – Sets the type of update (Normal, Late or Fixed) for the tween and eventually tells it to ignore Unity's timeScale. UpdateType.Normal: Updates every frame during Update calls. UpdateType.Late: Updates every frame during LateUpdate calls. UpdateType.Fixed: Updates using FixedUpdate calls. (default UpdateType.Normal)

IsIndependentUpdate – If TRUE the tween will ignore Unity's Time.timeScale.

NOTE: independentUpdate works also with UpdateType.Fixed but is not recommended in that case (because at timeScale 0 FixedUpdate won't run). (default FALSE)

DEBUG OPTIONS

DebugThis – Will print in the Debug.Log, the gameObject name this FSM is attached to, the FSM name and the State name that issued this action.

DOTWEEN LINE RENDERER COLOR

Changes the target's color to the given one. Note that this method requires to also insert the start colors for the tween, since LineRenderers have no way to get them.

GameObject – reference to a gameObject with a LineRenderer Component attached.

StartValue_color_1 - The start color 1 value to tween from. This method requires the start colors for the tween, since LineRenderers have no way to get them.

StartValue_color_2 - The start color 2 value to tween from. This method requires the start colors for the tween, since LineRenderers have no way to get them.

EndValue_color_1 - The end color 1 value to reach.

EndValue_color_2 - The end color 2 value to reach.

SetRelative – If setRelative is TRUE sets the tween as relative (the endValue will be calculated as startValue + endValue instead of being used directly). In case of Sequences, sets all the nested tweens as relative. IMPORTANT: Has no effect on Reverse Options, since in that case you directly choose if the tween isRelative or not in the settings below

Duration – The duration of the tween

SetSpeedBased – If isSpeedBased is TRUE sets the tween as speed based (the duration will represent the number of units/degrees the tween moves x second). NOTE: if you want your speed to be constant, also set the ease to Ease.Linear.

StartDelay – Set a delayed startup for the tween

REVERSE OPTIONS

PlayInReverse – Changes a TO tween into a FROM tween: sets the current target's startValue as the tween's endValue then immediately sends the target to the previously set endValue.

SetReverseRelative – If TRUE the FROM value will be calculated as relative to the current one

EVENTS

StartEvent – Playmaker Event to trigger when the tween starts

FinishEvent – Playmaker Event to trigger when the tween ends

FinishImmediately – If TRUE this action will finish immediately, if FALSE it will finish when the tween is complete.

TWEEN ID

TweenIdType – Select the source for the tween ID

StringAsId – Use a String as the tween ID

TagAsId – Use a Tag as the tween ID

EASE SETTINGS

SelectedEase – Select the source for the ease (ease type or animation curve)

EaseType – Sets the ease of the tween. If applied to a Sequence instead of a Tweener, the ease will be applied to the whole Sequence as if it was a single animated timeline. Sequences always have Ease.Linear by default, independently of the global default ease settings.

AnimationCurve – Set custom animation curve for the tween

LOOP SETTINGS

Loops – Number of loops. Setting loops to -1 will make the tween loop infinitely.

LoopType – Sets the looping options (Restart, Yoyo, Incremental) for the tween.

SPECIAL SETTINGS

AutoKillOnCompletion – If autoKillOnCompletion is set to TRUE the tween will be killed as soon as it completes, otherwise it will stay in memory and you'll be able to reuse it. (default TRUE)

Recyclable – Sets the recycling behaviour for the tween. If you don't set it then the default value (set either via DOTween.Init or DOTween.defaultRecyclable) will be used. (default FALSE)

UpdateType – Sets the type of update (Normal, Late or Fixed) for the tween and eventually tells it to ignore Unity's timeScale. UpdateType.Normal: Updates every frame during Update calls. UpdateType.Late: Updates every frame during LateUpdate calls. UpdateType.Fixed: Updates using FixedUpdate calls. (default UpdateType.Normal)

IsIndependentUpdate – If TRUE the tween will ignore Unity's Time.timeScale.

NOTE: independentUpdate works also with UpdateType.Fixed but is not recommended in that case (because at timeScale 0 FixedUpdate won't run). (default FALSE)

DEBUG OPTIONS

DebugThis – Will print in the Debug.Log, the gameObject name this FSM is attached to, the FSM name and the State name that issued this action.

DOTWEEN MATERIAL BLENDABLE COLOR

Tweens a Material's color to the given value, in a way that allows other DOBlendableColor tweens to work together on the same target, instead than fight each other as multiple DOColor would do.

Debug Options

Debug This ☐

GameObject – reference to a gameObject with a Renderer Component attached.
To - The end value to reach

SetRelative – If setRelative is TRUE sets the tween as relative (the endValue will be calculated as startValue + endValue instead of being used directly). In case of Sequences, sets all the nested tweens as relative. IMPORTANT: Has no effect on Reverse Options, since in that case you directly choose if the tween isRelative or not in the settings below

Property – The name of the material property to tween

Duration – The duration of the tween

SetSpeedBased – If isSpeedBased is TRUE sets the tween as speed based (the duration will represent the number of units/degrees the tween moves x second). NOTE: if you want your speed to be constant, also set the ease to Ease.Linear.

StartDelay – Set a delayed startup for the tween

REVERSE OPTIONS

PlayInReverse – Changes a TO tween into a FROM tween: sets the current target's startValue as the tween's endValue then immediately sends the target to the previously set endValue.

SetReverseRelative – If TRUE the FROM value will be calculated as relative to the current one

EVENTS

StartEvent – Playmaker Event to trigger when the tween starts

FinishEvent – Playmaker Event to trigger when the tween ends

FinishImmediately – If TRUE this action will finish immediately, if FALSE it will finish when the tween is complete.

TWEEN ID

TweenIdType – Select the source for the tween ID

StringAsId – Use a String as the tween ID

TagAsId – Use a Tag as the tween ID

EASE SETTINGS

SelectedEase – Select the source for the ease (ease type or animation curve)

EaseType – Sets the ease of the tween. If applied to a Sequence instead of a Tweener, the ease will be applied to the whole Sequence as if it was a single animated timeline. Sequences always have Ease.Linear by default, independently of the global default ease settings.

AnimationCurve – Set custom animation curve for the tween

LOOP SETTINGS

Loops – Number of loops. Setting loops to -1 will make the tween loop infinitely.

LoopType – Sets the looping options (Restart, Yoyo, Incremental) for the tween.

SPECIAL SETTINGS

AutoKillOnCompletion – If autoKillOnCompletion is set to TRUE the tween will be killed as soon as it completes, otherwise it will stay in memory and you'll be able to reuse it. (default TRUE)

Recyclable – Sets the recycling behaviour for the tween. If you don't set it then the default value (set either via DOTween.Init or DOTween.defaultRecyclable) will be used. (default FALSE)

UpdateType – Sets the type of update (Normal, Late or Fixed) for the tween and eventually tells it to ignore Unity's timeScale. UpdateType.Normal: Updates every frame during Update calls. UpdateType.Late: Updates every frame during LateUpdate calls. UpdateType.Fixed: Updates using FixedUpdate calls. (default UpdateType.Normal)

IsIndependentUpdate – If TRUE the tween will ignore Unity's Time.timeScale. NOTE: independentUpdate works also with UpdateType.Fixed but is not recommended in that case (because at timeScale 0 FixedUpdate won't run). (default FALSE)

DEBUG OPTIONS

DebugThis – Will print in the Debug.Log, the gameObject name this FSM is attached to, the FSM name and the State name that issued this action.

SetRelative – If setRelative is TRUE sets the tween as relative (the endValue will be calculated as startValue + endValue instead of being used directly). In case of Sequences, sets all the nested tweens as relative. IMPORTANT: Has no effect on Reverse Options, since in that case you directly choose if the tween isRelative or not in the settings below

Snapping – If TRUE the tween will smoothly snap all values to integers.

Duration – The duration of the tween

SetSpeedBased – If isSpeedBased is TRUE sets the tween as speed based (the duration will represent the number of units/degrees the tween moves x second). NOTE: if you want your speed to be constant, also set the ease to Ease.Linear.

StartDelay – Set a delayed startup for the tween

REVERSE OPTIONS

PlayInReverse – Changes a TO tween into a FROM tween: sets the current target's startValue as the tween's endValue then immediately sends the target to the previously set endValue.

SetReverseRelative – If TRUE the FROM value will be calculated as relative to the current one

EVENTS

StartEvent – Playmaker Event to trigger when the tween starts

FinishEvent – Playmaker Event to trigger when the tween ends

FinishImmediately – If TRUE this action will finish immediately, if FALSE it will finish when the tween is complete.

TWEEN ID

TweenIdType – Select the source for the tween ID

StringAsId – Use a String as the tween ID

TagAsId – Use a Tag as the tween ID

EASE SETTINGS

SelectedEase – Select the source for the ease (ease type or animation curve)

EaseType – Sets the ease of the tween. If applied to a Sequence instead of a Tweener, the ease will be applied to the whole Sequence as if it was a single animated timeline. Sequences always have Ease.Linear by default, independently of the global default ease settings.

AnimationCurve – Set custom animation curve for the tween

LOOP SETTINGS

Loops – Number of loops. Setting loops to -1 will make the tween loop infinitely.

LoopType – Sets the looping options (Restart, Yoyo, Incremental) for the tween.

SPECIAL SETTINGS

AutoKillOnCompletion – If autoKillOnCompletion is set to TRUE the tween will be killed as soon as it completes, otherwise it will stay in memory and you'll be able to reuse it. (default TRUE)

Recyclable – Sets the recycling behaviour for the tween. If you don't set it then the default value (set either via DOTween.Init or DOTween.defaultRecyclable) will be used. (default FALSE)

UpdateType – Sets the type of update (Normal, Late or Fixed) for the tween and eventually tells it to ignore Unity's timeScale. UpdateType.Normal: Updates every frame during Update calls. UpdateType.Late: Updates every frame during LateUpdate calls. UpdateType.Fixed: Updates using FixedUpdate calls. (default UpdateType.Normal)

IsIndependentUpdate – If TRUE the tween will ignore Unity's Time.timeScale.

NOTE: independentUpdate works also with UpdateType.Fixed but is not recommended in that case (because at timeScale 0 FixedUpdate won't run). (default FALSE)

DEBUG OPTIONS

DebugThis – Will print in the Debug.Log, the gameObject name this FSM is attached to, the FSM name and the State name that issued this action.

DOTWEEN RIGIDBODY MOVE Y

EASE SETTINGS

SelectedEase – Select the source for the ease (ease type or animation curve)

EaseType – Sets the ease of the tween. If applied to a Sequence instead of a Tweener, the ease will be applied to the whole Sequence as if it was a single animated timeline. Sequences always have Ease.Linear by default, independently of the global default ease settings.

AnimationCurve – Set custom animation curve for the tween

LOOP SETTINGS

Loops – Number of loops. Setting loops to -1 will make the tween loop infinitely.

LoopType – Sets the looping options (Restart, Yoyo, Incremental) for the tween.

SPECIAL SETTINGS

AutoKillOnCompletion – If autoKillOnCompletion is set to TRUE the tween will be killed as soon as it completes, otherwise it will stay in memory and you'll be able to reuse it. (default TRUE)

Recyclable – Sets the recycling behaviour for the tween. If you don't set it then the default value (set either via DOTween.Init or DOTween.defaultRecyclable) will be used. (default FALSE)

UpdateType – Sets the type of update (Normal, Late or Fixed) for the tween and eventually tells it to ignore Unity's timeScale. UpdateType.Normal: Updates every frame during Update calls. UpdateType.Late: Updates every frame during LateUpdate calls. UpdateType.Fixed: Updates using FixedUpdate calls. (default UpdateType.Normal)

IsIndependentUpdate – If TRUE the tween will ignore Unity's Time.timeScale.

NOTE: independentUpdate works also with UpdateType.Fixed but is not recommended in that case (because at timeScale 0 FixedUpdate won't run). (default FALSE)

DEBUG OPTIONS

DebugThis – Will print in the Debug.Log, the gameObject name this FSM is attached to, the FSM name and the State name that issued this action.

DOTWEEN SPRITE RENDERER BLENDABLE COLOR

Tweens the target's color to the given value, in a way that allows other DOBlendableColor tweens to work together on the same target, instead than fight each other as multiple DOColor would do.

GameObject – reference to a gameObject with a SpriteRenderer Component attached.

To – The end value to reach

SetRelative – If setRelative is TRUE sets the tween as relative (the endValue will be calculated as startValue + endValue instead of being used directly). In case of Sequences, sets all the nested tweens as relative. IMPORTANT: Has no effect on Reverse Options, since in that case you directly choose if the tween isRelative or not in the settings below

Duration – The duration of the tween

SetSpeedBased – If isSpeedBased is TRUE sets the tween as speed based (the duration will represent the number of units/degrees the tween moves x second). NOTE: if you want your speed to be constant, also set the ease to Ease.Linear.

StartDelay – Set a delayed startup for the tween

REVERSE OPTIONS

PlayInReverse – Changes a TO tween into a FROM tween: sets the current target's startValue as the tween's endValue then immediately sends the target to the previously set endValue.

SetReverseRelative – If TRUE the FROM value will be calculated as relative to the current one

EVENTS

StartEvent – Playmaker Event to trigger when the tween starts

FinishEvent – Playmaker Event to trigger when the tween ends

FinishImmediately – If TRUE this action will finish immediately, if FALSE it will finish when the tween is complete.

TWEEN ID

TweenIdType – Select the source for the tween ID

StringAsId – Use a String as the tween ID

TagAsId – Use a Tag as the tween ID

EASE SETTINGS

SelectedEase – Select the source for the ease (ease type or animation curve)

EaseType – Sets the ease of the tween. If applied to a Sequence instead of a Tweener, the ease will be applied to the whole Sequence as if it was a single animated timeline. Sequences always have Ease.Linear by default, independently of the global default ease settings.

AnimationCurve – Set custom animation curve for the tween

LOOP SETTINGS

Loops – Number of loops. Setting loops to -1 will make the tween loop infinitely.

LoopType – Sets the looping options (Restart, Yoyo, Incremental) for the tween.

SPECIAL SETTINGS

AutoKillOnCompletion – If autoKillOnCompletion is set to TRUE the tween will be killed as soon as it completes, otherwise it will stay in memory and you'll be able to reuse it. (default TRUE)

Recyclable – Sets the recycling behaviour for the tween. If you don't set it then the default value (set either via DOTween.Init or DOTween.defaultRecyclable) will be used. (default FALSE)

UpdateType – Sets the type of update (Normal, Late or Fixed) for the tween and eventually tells it to ignore Unity's timeScale. UpdateType.Normal: Updates every frame during Update calls. UpdateType.Late: Updates every frame during LateUpdate calls. UpdateType.Fixed: Updates using FixedUpdate calls. (default UpdateType.Normal)

IsIndependentUpdate – If TRUE the tween will ignore Unity's Time.timeScale. NOTE: independentUpdate works also with UpdateType.Fixed but is not recommended in that case (because at timeScale 0 FixedUpdate won't run). (default FALSE)

DEBUG OPTIONS

DebugThis – Will print in the Debug.Log, the gameObject name this FSM is attached to, the FSM name and the State name that issued this action.

Debug Options

Debug This ☐

GameObject – reference to a gameObject with a Transform Component attached.
By – The value to tween by
SetRelative – If setRelative is TRUE sets the tween as relative (the endValue will be calculated as startValue + endValue instead of being used directly). In case of Sequences, sets all the nested tweens as relative. IMPORTANT: Has no effect on Reverse Options, since in that case you directly choose if the tween isRelative or not in the settings below
RotateMode – Rotate Mode
Duration – The duration of the tween
SetSpeedBased – If isSpeedBased is TRUE sets the tween as speed based (the duration will represent the number of units/degrees the tween moves x second). NOTE: if you want your speed to be constant, also set the ease to Ease.Linear.
StartDelay – Set a delayed startup for the tween

REVERSE OPTIONS

PlayInReverse – Changes a TO tween into a FROM tween: sets the current target's startValue as the tween's endValue then immediately sends the target to the previously set endValue.
SetReverseRelative – If TRUE the FROM value will be calculated as relative to the current one

EVENTS

StartEvent – Playmaker Event to trigger when the tween starts
FinishEvent – Playmaker Event to trigger when the tween ends
FinishImmediately – If TRUE this action will finish immediately, if FALSE it will finish when the tween is complete.

TWEEN ID

TweenIdType – Select the source for the tween ID
StringAsId – Use a String as the tween ID
TagAsId – Use a Tag as the tween ID

EASE SETTINGS

SelectedEase – Select the source for the ease (ease type or animation curve)
EaseType – Sets the ease of the tween. If applied to a Sequence instead of a Tweener, the ease will be applied to the whole Sequence as if it was a single animated timeline. Sequences always have Ease.Linear by default, independently of the global default ease settings.
AnimationCurve – Set custom animation curve for the tween

LOOP SETTINGS

Loops – Number of loops. Setting loops to -1 will make the tween loop infinitely.
LoopType – Sets the looping options (Restart, Yoyo, Incremental) for the tween.

SPECIAL SETTINGS

AutoKillOnCompletion – If autoKillOnCompletion is set to TRUE the tween will be killed as soon as it completes, otherwise it will stay in memory and you'll be able to reuse it. (default TRUE)
Recyclable – Sets the recycling behaviour for the tween. If you don't set it then the default value (set either via DOTween.Init or DOTween.defaultRecyclable) will be used. (default FALSE)
UpdateType – Sets the type of update (Normal, Late or Fixed) for the tween and eventually tells it to ignore Unity's timeScale. UpdateType.Normal: Updates every frame during Update calls. UpdateType.Late: Updates every frame during LateUpdate calls. UpdateType.Fixed: Updates using FixedUpdate calls. (default UpdateType.Normal)
IsIndependentUpdate – If TRUE the tween will ignore Unity's Time.timeScale. NOTE: independentUpdate works also with UpdateType.Fixed but is not recommended in that case (because at timeScale 0 FixedUpdate won't run). (default FALSE)

DEBUG OPTIONS

DebugThis – Will print in the Debug.Log, the gameObject name this FSM is attached to, the FSM name and the State name that issued this action.

Tweens a Transform's localScale BY the given value (as if it was set to relative), in a way that allows other DOBlendableScale tweens to work together on the same target, instead than fight each other as multiple DOScale would do.

GameObject – reference to a gameObject with a Transform Component attached.

Path - The waypoints to go through

PathType – The type of path: Linear (straight path) or CatmullRom (curved CatmullRom path)

PathMode – The path mode: 3D, side-scroller 2D, top-down 2D

Resolution – The resolution of the path (useless in case of Linear paths): higher resolutions make for more detailed curved paths but are more expensive. Defaults to 10, but a value of 5 is usually enough if you don't have dramatic long curves between waypoints

GizmoColor – The color of the path (shown when gizmos are active in the Play panel and the tween is running)

Duration – The duration of the tween

SetSpeedBased – If isSpeedBased is TRUE sets the tween as speed based (the duration will represent the number of units/degrees the tween moves x second).

NOTE: if you want your speed to be constant, also set the ease to `Ease.Linear`.

StartDelay – Set a delayed startup for the tween

SET PATH OPTIONS

ClosePath – If TRUE the path will be automatically closed

LockPosition – The eventual movement axis to lock.

LockRotation – The eventual rotation axis to lock.

SET LOOK AT OPTIONS

LookAt – Select the look at target.

LookAtPosition – The position to look at. Orients the target towards the given position

LookAtTarget – The target to look at. Orients the target towards the given transform of the GameObject

LookAhead – The lookAhead percentage to use when orienting to the path (0 to 1).
Orients the target to the path with the given lookAhead

SET CUSTOM DIRECTION TO CONSIDER AS 'FORWARD'

ForwardDirection – The eventual direction to consider as 'forward'. Default: the regular forward side of the transform.

SET CUSTOM UP TO CONSIDER WHICH DIRECTION IS 'UP'

Up – The vector that defines in which direction up is. Default: Vector3.up

EVENTS

StartEvent – Playmaker Event to trigger when the tween starts

FinishEvent – Playmaker Event to trigger when the tween ends

FinishImmediately – If TRUE this action will finish immediately, if FALSE it will finish when the tween is complete.

TWEEN ID

TweenIdType – Select the source for the tween ID

StringAsId – Use a String as the tween ID

TagAsId – Use a Tag as the tween ID

EASE SETTINGS

SelectedEase – Select the source for the ease (ease type or animation curve)

EaseType – Sets the ease of the tween. If applied to a Sequence instead of a Tween, the ease will be applied to the whole Sequence as if it was a single animated timeline. Sequences always have Ease.Linear by default, independently of the global default ease settings.

AnimationCurve – Set custom animation curve for the tween

LOOP SETTINGS

Loops – Number of loops. Setting loops to -1 will make the tween loop infinitely.

LoopType – Sets the looping options (Restart, Yoyo, Incremental) for the tween.

SPECIAL SETTINGS

AutoKillOnCompletion – If autoKillOnCompletion is set to TRUE the tween will be killed as soon as it completes, otherwise it will stay in memory and you'll be able to reuse it. (default TRUE)

Recyclable – Sets the recycling behaviour for the tween. If you don't set it then the default value (set either via `DOTween.Init` or `DOTween.defaultRecyclable`) will be used. (default `FALSE`)

UpdateType – Sets the type of update (Normal, Late or Fixed) for the tween and eventually tells it to ignore Unity's timeScale. UpdateType.Normal: Updates every frame during Update calls. UpdateType.Late: Updates every frame during LateUpdate calls. UpdateType.Fixed: Updates using FixedUpdate calls. (default UpdateType.Normal)

IsIndependentUpdate – If TRUE the tween will ignore Unity's Time.timeScale.

NOTE: `independentUpdate` works also with `UpdateType.Fixed` but is not recommended in that case (because at `timeScale 0` `FixedUpdate` won't run). (default `FALSE`)

DEBUG OPTIONS

DebugThis – Will print in the Debug.Log, the gameObject name this FSM is attached to, the FSM name and the State name that issued this action.

DOTWEEN TRANSFORM LOCAL ROTATE

Rotates the target's localRotation to the given value. Requires a Vector3 end value, not a Quaternion (if you really want to pass a Quaternion, just convert it using `myQuaternion.eulerAngles`).

GameObject – reference to a gameObject with a Transform Component attached.
To - The end value to reach

SetRelative – If setRelative is TRUE sets the tween as relative (the endValue will be calculated as startValue + endValue instead of being used directly). In case of Sequences, sets all the nested tweens as relative. IMPORTANT: Has no effect on Reverse Options, since in that case you directly choose if the tween isRelative or not in the settings below

RotateMode – Rotate Mode

Duration – The duration of the tween

SetSpeedBased – If isSpeedBased is TRUE sets the tween as speed based (the duration will represent the number of units/degrees the tween moves x second). NOTE: if you want your speed to be constant, also set the ease to Ease.Linear.

StartDelay – Set a delayed startup for the tween

REVERSE OPTIONS

PlayInReverse – Changes a TO tween into a FROM tween: sets the current target's startValue as the tween's endValue then immediately sends the target to the previously set endValue.

SetReverseRelative – If TRUE the FROM value will be calculated as relative to the current one

EVENTS

StartEvent – Playmaker Event to trigger when the tween starts

FinishEvent – Playmaker Event to trigger when the tween ends

FinishImmediately – If TRUE this action will finish immediately, if FALSE it will finish when the tween is complete.

TWEEN ID

TweenIdType – Select the source for the tween ID

StringAsId – Use a String as the tween ID

TagAsId – Use a Tag as the tween ID

GameObject – reference to a gameObject with a Transform Component attached.
Punch - The direction and strength of the punch (added to the Transform's current position)

Vibrato – Indicates how much will the punch vibrate

Elasticity – Represents how much (0 to 1) the vector will go beyond the starting position when bouncing backwards. 1 creates a full oscillation between the punch direction and the opposite direction, while 0 oscillates only between the punch and the start position

Snapping – If TRUE the tween will smoothly snap all values to integers

Duration – The duration of the tween

SetSpeedBased – If isSpeedBased is TRUE sets the tween as speed based (the duration will represent the number of units/degrees the tween moves x second).
NOTE: if you want your speed to be constant, also set the ease to Ease.Linear.

StartDelay – Set a delayed startup for the tween

EVENTS

StartEvent – Playmaker Event to trigger when the tween starts

FinishEvent – Playmaker Event to trigger when the tween ends

FinishImmediately – If TRUE this action will finish immediately, if FALSE it will finish when the tween is complete.

TWEEN ID

TweenIdType – Select the source for the tween ID

StringAsId – Use a String as the tween ID

TagAsId – Use a Tag as the tween ID

EASE SETTINGS

SelectedEase – Select the source for the ease (ease type or animation curve)

EaseType – Sets the ease of the tween. If applied to a Sequence instead of a Tweener, the ease will be applied to the whole Sequence as if it was a single animated timeline. Sequences always have Ease.Linear by default, independently of the global default ease settings.

AnimationCurve – Set custom animation curve for the tween

LOOP SETTINGS

Loops – Number of loops. Setting loops to -1 will make the tween loop infinitely.

LoopType – Sets the looping options (Restart, Yoyo, Incremental) for the tween.

SPECIAL SETTINGS

AutoKillOnCompletion – If autoKillOnCompletion is set to TRUE the tween will be killed as soon as it completes, otherwise it will stay in memory and you'll be able to reuse it. (default TRUE)

Recyclable – Sets the recycling behaviour for the tween. If you don't set it then the default value (set either via DOTween.Init or DOTween.defaultRecyclable) will be used. (default FALSE)

UpdateType – Sets the type of update (Normal, Late or Fixed) for the tween and eventually tells it to ignore Unity's timeScale. UpdateType.Normal: Updates every frame during Update calls. UpdateType.Late: Updates every frame during LateUpdate calls. UpdateType.Fixed: Updates using FixedUpdate calls. (default UpdateType.Normal)

IsIndependentUpdate – If TRUE the tween will ignore Unity's Time.timeScale.

NOTE: independentUpdate works also with UpdateType.Fixed but is not recommended in that case (because at timeScale 0 FixedUpdate won't run). (default FALSE)

DEBUG OPTIONS

DebugThis – Will print in the Debug.Log, the gameObject name this FSM is attached to, the FSM name and the State name that issued this action.

GameObject – reference to a gameObject with a Transform Component attached.
Strength - The shake strength on each axis

Vibrato – Indicates how much will the shake vibrate

Randomness – Indicates how much the shake will be random (0 to 180 - values higher than 90 kind of suck, so beware). Setting it to 0 will shake along a single direction.

Snapping – If TRUE the tween will smoothly snap all values to integers

Duration – The duration of the tween

SetSpeedBased – If isSpeedBased is TRUE sets the tween as speed based (the duration will represent the number of units/degrees the tween moves x second).
NOTE: if you want your speed to be constant, also set the ease to Ease.Linear.

StartDelay – Set a delayed startup for the tween

EVENTS

StartEvent – Playmaker Event to trigger when the tween starts

FinishEvent – Playmaker Event to trigger when the tween ends

FinishImmediately – If TRUE this action will finish immediately, if FALSE it will finish when the tween is complete.

TWEEN ID

TweenIdType – Select the source for the tween ID

StringAsId – Use a String as the tween ID

TagAsId – Use a Tag as the tween ID

EASE SETTINGS

SelectedEase – Select the source for the ease (ease type or animation curve)

EaseType – Sets the ease of the tween. If applied to a Sequence instead of a Tweener, the ease will be applied to the whole Sequence as if it was a single animated timeline. Sequences always have Ease.Linear by default, independently of the global default ease settings.

AnimationCurve – Set custom animation curve for the tween

LOOP SETTINGS

Loops – Number of loops. Setting loops to -1 will make the tween loop infinitely.

LoopType – Sets the looping options (Restart, Yoyo, Incremental) for the tween.

SPECIAL SETTINGS

AutoKillOnCompletion – If autoKillOnCompletion is set to TRUE the tween will be killed as soon as it completes, otherwise it will stay in memory and you'll be able to reuse it. (default TRUE)

Recyclable – Sets the recycling behaviour for the tween. If you don't set it then the default value (set either via DOTween.Init or DOTween.defaultRecyclable) will be used. (default FALSE)

UpdateType – Sets the type of update (Normal, Late or Fixed) for the tween and eventually tells it to ignore Unity's timeScale. UpdateType.Normal: Updates every frame during Update calls. UpdateType.Late: Updates every frame during LateUpdate calls. UpdateType.Fixed: Updates using FixedUpdate calls. (default UpdateType.Normal)

IsIndependentUpdate – If TRUE the tween will ignore Unity's Time.timeScale.
NOTE: independentUpdate works also with UpdateType.Fixed but is not recommended in that case (because at timeScale 0 FixedUpdate won't run). (default FALSE)

DEBUG OPTIONS

DebugThis – Will print in the Debug.Log, the gameObject name this FSM is attached to, the FSM name and the State name that issued this action.

EASE SETTINGS

SelectedEase – Select the source for the ease (ease type or animation curve)

EaseType – Sets the ease of the tween. If applied to a Sequence instead of a Tweener, the ease will be applied to the whole Sequence as if it was a single animated timeline. Sequences always have Ease.Linear by default, independently of the global default ease settings.

AnimationCurve – Set custom animation curve for the tween

LOOP SETTINGS

Loops – Number of loops. Setting loops to -1 will make the tween loop infinitely.

LoopType – Sets the looping options (Restart, Yoyo, Incremental) for the tween.

SPECIAL SETTINGS

AutoKillOnCompletion – If autoKillOnCompletion is set to TRUE the tween will be killed as soon as it completes, otherwise it will stay in memory and you'll be able to reuse it. (default TRUE)

Recyclable – Sets the recycling behaviour for the tween. If you don't set it then the default value (set either via DOTween.Init or DOTween.defaultRecyclable) will be used. (default FALSE)

UpdateType – Sets the type of update (Normal, Late or Fixed) for the tween and eventually tells it to ignore Unity's timeScale. UpdateType.Normal: Updates every frame during Update calls. UpdateType.Late: Updates every frame during LateUpdate calls. UpdateType.Fixed: Updates using FixedUpdate calls. (default UpdateType.Normal)

IsIndependentUpdate – If TRUE the tween will ignore Unity's Time.timeScale.

NOTE: independentUpdate works also with UpdateType.Fixed but is not recommended in that case (because at timeScale 0 FixedUpdate won't run). (default FALSE)

DEBUG OPTIONS

DebugThis – Will print in the Debug.Log, the gameObject name this FSM is attached to, the FSM name and the State name that issued this action.

DOTWEEN LAYOUT ELEMENT MIN SIZE

Changes the layoutElement's minWidth/Height to the given one.

GameObject – reference to a gameObject with a LayoutElement Component attached.

To - The end value to reach

SetRelative – If setRelative is TRUE sets the tween as relative (the endValue will be calculated as startValue + endValue instead of being used directly). In case of Sequences, sets all the nested tweens as relative. IMPORTANT: Has no effect on Reverse Options, since in that case you directly choose if the tween isRelative or not in the settings below

Snapping – If TRUE the tween will smoothly snap all values to integers

Duration – The duration of the tween

SetSpeedBased – If isSpeedBased is TRUE sets the tween as speed based (the duration will represent the number of units/degrees the tween moves x second). NOTE: if you want your speed to be constant, also set the ease to Ease.Linear.

StartDelay – Set a delayed startup for the tween

REVERSE OPTIONS

PlayInReverse – Changes a TO tween into a FROM tween: sets the current target's startValue as the tween's endValue then immediately sends the target to the previously set endValue.

SetReverseRelative – If TRUE the FROM value will be calculated as relative to the current one

EVENTS

StartEvent – Playmaker Event to trigger when the tween starts

FinishEvent – Playmaker Event to trigger when the tween ends

FinishImmediately – If TRUE this action will finish immediately, if FALSE it will finish when the tween is complete.

TWEEN ID

TweenIdType – Select the source for the tween ID

StringAsId – Use a String as the tween ID

TagAsId – Use a Tag as the tween ID

EASE SETTINGS

SelectedEase – Select the source for the ease (ease type or animation curve)

EaseType – Sets the ease of the tween. If applied to a Sequence instead of a Tweener, the ease will be applied to the whole Sequence as if it was a single animated timeline. Sequences always have Ease.Linear by default, independently of the global default ease settings.

AnimationCurve – Set custom animation curve for the tween

LOOP SETTINGS

Loops – Number of loops. Setting loops to -1 will make the tween loop infinitely.

LoopType – Sets the looping options (Restart, Yoyo, Incremental) for the tween.

SPECIAL SETTINGS

AutoKillOnCompletion – If autoKillOnCompletion is set to TRUE the tween will be killed as soon as it completes, otherwise it will stay in memory and you'll be able to reuse it. (default TRUE)

Recyclable – Sets the recycling behaviour for the tween. If you don't set it then the default value (set either via DOTween.Init or DOTween.defaultRecyclable) will be used. (default FALSE)

UpdateType – Sets the type of update (Normal, Late or Fixed) for the tween and eventually tells it to ignore Unity's timeScale. UpdateType.Normal: Updates every frame during Update calls. UpdateType.Late: Updates every frame during LateUpdate calls. UpdateType.Fixed: Updates using FixedUpdate calls. (default UpdateType.Normal)

IsIndependentUpdate – If TRUE the tween will ignore Unity's Time.timeScale. NOTE: independentUpdate works also with UpdateType.Fixed but is not recommended in that case (because at timeScale 0 FixedUpdate won't run). (default FALSE)

DEBUG OPTIONS

DebugThis – Will print in the Debug.Log, the gameObject name this FSM is attached to, the FSM name and the State name that issued this action.

GameObject – reference to a gameObject with a RectTransform Component attached.

To - The end value to reach

SetRelative – If setRelative is TRUE sets the tween as relative (the endValue will be calculated as startValue + endValue instead of being used directly). In case of Sequences, sets all the nested tweens as relative. IMPORTANT: Has no effect on Reverse Options, since in that case you directly choose if the tween isRelative or not in the settings below

JumpPower – Power of the jump (the max height of the jump is represented by this plus the final Y offset)

NumJumps – Total number of jumps

Snapping – If TRUE the tween will smoothly snap all values to integers

Duration – The duration of the tween

SetSpeedBased – If isSpeedBased is TRUE sets the tween as speed based (the duration will represent the number of units/degrees the tween moves x second). NOTE: if you want your speed to be constant, also set the ease to Ease.Linear.

StartDelay – Set a delayed startup for the tween

EVENTS

StartEvent – Playmaker Event to trigger when the tween starts

FinishEvent – Playmaker Event to trigger when the tween ends

FinishImmediately – If TRUE this action will finish immediately, if FALSE it will finish when the tween is complete.

TWEEN ID

TweenIdType – Select the source for the tween ID

StringAsId – Use a String as the tween ID

TagAsId – Use a Tag as the tween ID

EASE SETTINGS

SelectedEase – Select the source for the ease (ease type or animation curve)

EaseType – Sets the ease of the tween. If applied to a Sequence instead of a Tweener, the ease will be applied to the whole Sequence as if it was a single animated timeline. Sequences always have Ease.Linear by default, independently of the global default ease settings.

AnimationCurve – Set custom animation curve for the tween

LOOP SETTINGS

Loops – Number of loops. Setting loops to -1 will make the tween loop infinitely.

LoopType – Sets the looping options (Restart, Yoyo, Incremental) for the tween.

SPECIAL SETTINGS

AutoKillOnCompletion – If autoKillOnCompletion is set to TRUE the tween will be killed as soon as it completes, otherwise it will stay in memory and you'll be able to reuse it. (default TRUE)

Recyclable – Sets the recycling behaviour for the tween. If you don't set it then the default value (set either via DOTween.Init or DOTween.defaultRecyclable) will be used. (default FALSE)

UpdateType – Sets the type of update (Normal, Late or Fixed) for the tween and eventually tells it to ignore Unity's timeScale. UpdateType.Normal: Updates every frame during Update calls. UpdateType.Late: Updates every frame during LateUpdate calls. UpdateType.Fixed: Updates using FixedUpdate calls. (default UpdateType.Normal)

IsIndependentUpdate – If TRUE the tween will ignore Unity's Time.timeScale. NOTE: independentUpdate works also with UpdateType.Fixed but is not recommended in that case (because at timeScale 0 FixedUpdate won't run). (default FALSE)

DEBUG OPTIONS

DebugThis – Will print in the Debug.Log, the gameObject name this FSM is attached to, the FSM name and the State name that issued this action.

Punches the target's anchoredPosition with the given values.

GameObject – reference to a gameObject with a RectTransform Component attached.

Punch - The direction and strength of the punch (added to the RectTransform's current position)

Vibrato – Indicates how much will the punch vibrate

Elasticity – Represents how much (0 to 1) the vector will go beyond the starting position when bouncing backwards. 1 creates a full oscillation between the punch direction and the opposite direction, while 0 oscillates only between the punch and the start position

Snapping – If TRUE the tween will smoothly snap all values to integers

Duration – The duration of the tween

SetSpeedBased – If isSpeedBased is TRUE sets the tween as speed based (the duration will represent the number of units/degrees the tween moves x second). NOTE: if you want your speed to be constant, also set the ease to Ease.Linear.

GameObject – reference to a gameObject with a Text Component attached.

To – The end value to reach

RichTextEnabled – If TRUE (default), rich text will be interpreted correctly while animated, otherwise all tags will be considered as normal text

ScrambleMode – The type of scramble mode to use, if any. If different than ScrambleMode.None the string will appear from a random animation of characters, otherwise it will compose itself regularly. None(default): no scrambling will be applied. All / Uppercase / Lowercase / Numerals: type of characters to be used while scrambling. Custom: will use the custom characters in scrambleChars.

ScrambleChars – A string containing the characters to use for custom scrambling. Use as many characters as possible (minimum 10) because DOTween uses a fast scramble mode which gives better results with more characters.

SetRelative – If setRelative is TRUE sets the tween as relative (the endValue will be calculated as startValue + endValue instead of being used directly). In case of Sequences, sets all the nested tweens as relative. IMPORTANT: Has no effect on Reverse Options, since in that case you directly choose if the tween isRelative or not in the settings below

Duration – The duration of the tween

SetSpeedBased – If isSpeedBased is TRUE sets the tween as speed based (the duration will represent the number of units/degrees the tween moves x second). NOTE: if you want your speed to be constant, also set the ease to Ease.Linear.

StartDelay – Set a delayed startup for the tween

REVERSE OPTIONS

PlayInReverse – Changes a TO tween into a FROM tween: sets the current target's startValue as the tween's endValue then immediately sends the target to the previously set endValue.

SetReverseRelative – If TRUE the FROM value will be calculated as relative to the current one

EVENTS

StartEvent – Playmaker Event to trigger when the tween starts

FinishEvent – Playmaker Event to trigger when the tween ends

FinishImmediately – If TRUE this action will finish immediately, if FALSE it will finish when the tween is complete.

TWEEN ID

TweenIdType – Select the source for the tween ID

StringAsId – Use a String as the tween ID

TagAsId – Use a Tag as the tween ID

EASE SETTINGS

SelectedEase – Select the source for the ease (ease type or animation curve)

EaseType – Sets the ease of the tween. If applied to a Sequence instead of a Tweener, the ease will be applied to the whole Sequence as if it was a single animated timeline. Sequences always have Ease.Linear by default, independently of the global default ease settings.

AnimationCurve – Set custom animation curve for the tween

LOOP SETTINGS

Loops – Number of loops. Setting loops to -1 will make the tween loop infinitely.

LoopType – Sets the looping options (Restart, Yoyo, Incremental) for the tween.

SPECIAL SETTINGS

AutoKillOnCompletion – If autoKillOnCompletion is set to TRUE the tween will be killed as soon as it completes, otherwise it will stay in memory and you'll be able to reuse it. (default TRUE)

Recyclable – Sets the recycling behaviour for the tween. If you don't set it then the default value (set either via DOTween.Init or DOTween.defaultRecyclable) will be used. (default FALSE)

UpdateType – Sets the type of update (Normal, Late or Fixed) for the tween and eventually tells it to ignore Unity's timeScale. UpdateType.Normal: Updates every frame during Update calls. UpdateType.Late: Updates every frame during LateUpdate calls. UpdateType.Fixed: Updates using FixedUpdate calls. (default UpdateType.Normal)

IsIndependentUpdate – If TRUE the tween will ignore Unity's Time.timeScale.

NOTE: independentUpdate works also with UpdateType.Fixed but is not recommended in that case (because at timeScale 0 FixedUpdate won't run). (default FALSE)

DEBUG OPTIONS

DebugThis – Will print in the Debug.Log, the gameObject name this FSM is attached to, the FSM name and the State name that issued this action.

DOTWEEN INIT

Initializes DOTween. Call it without any parameter to use the preferences you set in DOTween's Utility Panel (otherwise they will be overridden by any eventual parameter passed)

RecycleAllByDefault – If TRUE all new tweens will be set for recycling, meaning that when killed they won't be destroyed but instead will be put in a pool and reused rather than creating new tweens. This option allows you to avoid GC allocations by reusing tweens, but you will have to take care of tween references, since they might result active even if they were killed (since they might have been respawned and might now be in use as other completely different tweens)

UseSafeMode – If set to TRUE tweens will be slightly slower but safer, allowing DOTween to automatically take care of things like targets being destroyed while a tween is running. WARNING: on iOS safeMode works only if stripping level is set to 'Strip Assemblies' or Script Call Optimization is set to 'Slow and Safe'.

LogBehaviour – Depending on the chosen mode DOTween will log only errors, errors and warnings, or everything plus additional informations.

SET CAPACITY

TweenersCapacity – Directly sets the current max capacity of Tweeners (meaning how many Tweeners can be running at the same time) so that DOTween doesn't need to automatically increase them in case the max is reached (which might lead to hiccups when that happens).

SequencesCapacity – Directly sets the current max capacity of Sequences (meaning how many Sequences can be running at the same time) so that DOTween doesn't need to automatically increase them in case the max is reached (which might lead to hiccups when that happens). Sequences capacity must be less or equal to Tweeners capacity (if you pass a low Tweener capacity it will be automatically increased to match the Sequence's). Beware: use this method only when there are no tweens running.

DEBUG OPTIONS

DebugThis – Will print in the Debug.Log, the gameObject name this FSM is attached to, the FSM name and the State name that issued this action.

CONTROL METHODS

DOTWEEN CONTROL METHODS COMPLETE ALL

Sends all tweens to their end position (has no effect with tweens that have infinite loops).

WithCallbacks – For Sequences only: if TRUE internal Sequence callbacks will be fired, otherwise they will be ignored.

DEBUG OPTIONS

DebugThis – Will print in the Debug.Log, the gameObject name this FSM is attached to, the FSM name and the State name that issued this action.

DOTWEEN CONTROL METHODS COMPLETE BY ID

Sends all tweens with the given ID to their end position (has no effect with tweens that have infinite loops).

TweenId – Tween Id

WithCallbacks – For Sequences only: if TRUE internal Sequence callbacks will be fired, otherwise they will be ignored.

DEBUG OPTIONS

DebugThis – Will print in the Debug.Log, the gameObject name this FSM is attached to, the FSM name and the State name that issued this action.

DOTWEEN CONTROL METHODS FLIP ALL

Flips the direction of all the tweens (backwards if it was going forward or viceversa).

DEBUG OPTIONS

DebugThis – Will print in the Debug.Log, the gameObject name this FSM is attached to, the FSM name and the State name that issued this action.

DOTWEEN CONTROL METHODS FLIP BY ID

Flips the direction of all tweens with the given ID (backwards if it was going forward or viceversa).

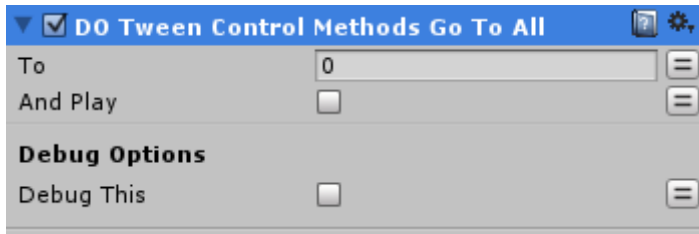

TweenId – Tween Id

DEBUG OPTIONS

DebugThis – Will print in the Debug.Log, the gameObject name this FSM is attached to, the FSM name and the State name that issued this action.

DOTWEEN CONTROL METHODS GO TO ALL

Sends all tweens to the given position (calculating also eventual loop cycles)

To – Time position to reach (if higher than the whole tween duration the tween will simply reach its end).

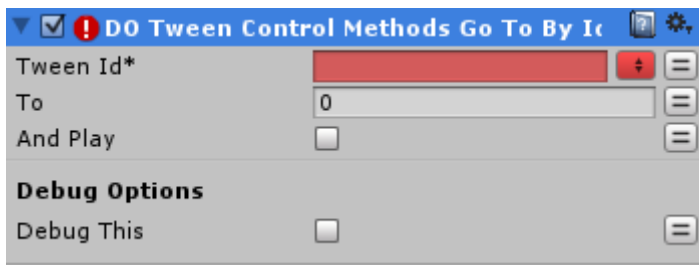

AndPlay – If TRUE the tween will play after reaching the given position, otherwise it will be paused.

DEBUG OPTIONS

DebugThis – Will print in the Debug.Log, the gameObject name this FSM is attached to, the FSM name and the State name that issued this action.

DOTWEEN CONTROL METHODS GO TO ALL BY ID

Sends all tweens with the given ID to the given position (calculating also eventual loop cycles)

TweenId – Tween Id

To – Time position to reach (if higher than the whole tween duration the tween will simply reach its end).

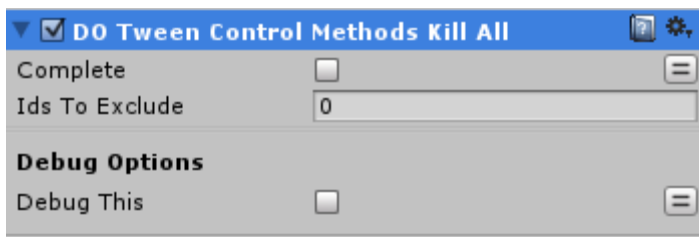

AndPlay – If TRUE the tween will play after reaching the given position, otherwise it will be paused.

DEBUG OPTIONS

DebugThis – Will print in the Debug.Log, the gameObject name this FSM is attached to, the FSM name and the State name that issued this action.

DOTWEEN CONTROL METHODS KILL ALL

Kills all tweens. A tween is killed automatically when it reaches completion (unless you prevent it using `SetAutoKill(false)`), but you can use this method to kill it sooner if you don't need it anymore.

Complete – If TRUE instantly completes the tween before killing it.

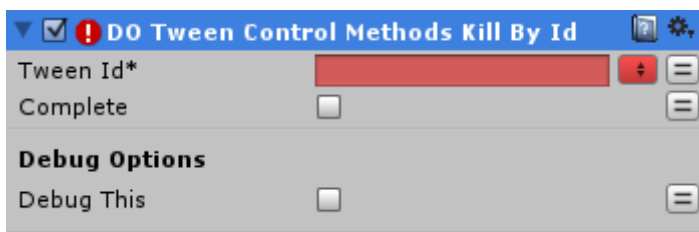

IdsToExclude – KillAll only > Eventual ids to exclude from the operation.

DEBUG OPTIONS

DebugThis – Will print in the Debug.Log, the gameObject name this FSM is attached to, the FSM name and the State name that issued this action.

DOTWEEN CONTROL METHODS KILL BY ID

Kills all tweens with the given ID. A tween is killed automatically when it reaches completion (unless you prevent it using `SetAutoKill(false)`), but you can use this method to kill it sooner if you don't need it anymore.

TweenId – Tween Id

Complete – If TRUE instantly completes the tween before killing it.

DEBUG OPTIONS

DebugThis – Will print in the Debug.Log, the gameObject name this FSM is attached to, the FSM name and the State name that issued this action.

DOTWEEN CONTROL METHODS PAUSE ALL

Pauses all tweens

DEBUG OPTIONS

DebugThis – Will print in the Debug.Log, the gameObject name this FSM is attached to, the FSM name and the State name that issued this action.

DOTWEEN CONTROL METHODS PAUSE BY ID

Pauses all tweens with the given ID

TweenId – Tween Id

DEBUG OPTIONS

DebugThis – Will print in the Debug.Log, the gameObject name this FSM is attached to, the FSM name and the State name that issued this action.

DOTWEEN CONTROL METHODS PLAY ALL

Plays all tweens (meaning the tweens that were not already playing or complete)

DEBUG OPTIONS

DebugThis – Will print in the Debug.Log, the gameObject name this FSM is attached to, the FSM name and the State name that issued this action.

DOTWEEN CONTROL METHODS PLAY BACKWARDS ALL

Plays backwards all tweens (meaning the tweens that were not already started, playing backwards or rewinded)

DEBUG OPTIONS

DebugThis – Will print in the Debug.Log, the gameObject name this FSM is attached to, the FSM name and the State name that issued this action.

DOTWEEN CONTROL METHODS PLAY BACKWARDS BY ID

Plays backwards all tweens with the given ID (meaning the tweens that were not already started, playing backwards or rewinded)

TweenId – Tween Id

DEBUG OPTIONS

DebugThis – Will print in the Debug.Log, the gameObject name this FSM is attached to, the FSM name and the State name that issued this action.

DOTWEEN CONTROL METHODS PLAY BY ID

Plays all tweens with the given ID (meaning the tweens that were not already playing or complete)

TweenId – Tween Id

DEBUG OPTIONS

DebugThis – Will print in the Debug.Log, the gameObject name this FSM is attached to, the FSM name and the State name that issued this action.

DOTWEEN CONTROL METHODS PLAY FORWARD ALL

Plays forward all tweens (meaning tweens that were not already playing forward or complete)

DEBUG OPTIONS

DebugThis – Will print in the Debug.Log, the gameObject name this FSM is attached to, the FSM name and the State name that issued this action.

DOTWEEN CONTROL METHODS PLAY FORWARD BY ID

Plays forward all tweens with the given ID (meaning tweens that were not already playing forward or complete)

TweenId – Tween Id

DEBUG OPTIONS

DebugThis – Will print in the Debug.Log, the gameObject name this FSM is attached to, the FSM name and the State name that issued this action.

DOTWEEN CONTROL METHODS RESTART ALL

Restarts all tweens

IncludeDelay – If TRUE includes the eventual tween delay, otherwise skips it.

DEBUG OPTIONS

DebugThis – Will print in the Debug.Log, the gameObject name this FSM is attached to, the FSM name and the State name that issued this action.

DOTWEEN CONTROL METHODS PLAY RESTART BY ID

Plays forward all tweens with the given ID (meaning tweens that were not already playing forward or complete)

TweenId – Tween Id

IncludeDelay – If TRUE includes the eventual tween delay, otherwise skips it.

DEBUG OPTIONS

DebugThis – Will print in the Debug.Log, the gameObject name this FSM is attached to, the FSM name and the State name that issued this action.

DOTWEEN CONTROL METHODS REWIND ALL

Rewinds and pauses all tweens (meaning tweens that were not already rewinded)

IncludeDelay – If TRUE includes the eventual tween delay, otherwise skips it.

DEBUG OPTIONS

DebugThis – Will print in the Debug.Log, the gameObject name this FSM is attached to, the FSM name and the State name that issued this action.

DOTWEEN CONTROL METHODS REWIND BY ID

Rewinds and pauses all tweens with the given ID (meaning tweens that were not already rewinded)

TweenId – Tween Id

IncludeDelay – If TRUE includes the eventual tween delay, otherwise skips it.

DEBUG OPTIONS

DebugThis – Will print in the Debug.Log, the gameObject name this FSM is attached to, the FSM name and the State name that issued this action.

DOTWEEN CONTROL METHODS SMOOTH REWIND ALL

Smoothly rewinds all tweens (delays excluded) (meaning tweens that were not already rewinded). A 'smooth rewind' animates the tween to its start position, skipping all elapsed loops (except in case of LoopType.Incremental) while keeping the animation fluent. Note that a tween that was smoothly rewinded will have its play direction flipped

DEBUG OPTIONS

DebugThis – Will print in the Debug.Log, the gameObject name this FSM is attached to, the FSM name and the State name that issued this action.

DOTWEEN CONTROL METHODS SMOOTH REWIND BY ID

Smoothly rewinds all tweens with the given ID (delays excluded) (meaning tweens that were not already rewinded). A 'smooth rewind' animates the tween to its start position, skipping all elapsed loops (except in case of LoopType.Incremental) while keeping the animation fluent. Note that a tween that was smoothly rewinded will have its play direction flipped

TweenId – Tween Id

DEBUG OPTIONS

DebugThis – Will print in the Debug.Log, the gameObject name this FSM is attached to, the FSM name and the State name that issued this action.

DOTWEEN CONTROL METHODS TOGGLE PAUSE ALL

Toggles the play state of all tweens (meaning tweens that could be played or paused, depending on the toggle state)

DEBUG OPTIONS

DebugThis – Will print in the Debug.Log, the gameObject name this FSM is attached to, the FSM name and the State name that issued this action.

DOTWEEN CONTROL METHODS TOGGLE PAUSE BY ID

Toggles the play state of all tweens with the given ID (meaning tweens that could be played or paused, depending on the toggle state)

TweenId – Tween Id

DEBUG OPTIONS

DebugThis – Will print in the Debug.Log, the gameObject name this FSM is attached to, the FSM name and the State name that issued this action.

DOTWEEN RIGIDBODY SPIRAL

GameObject – reference to a gameObject with a Rigidbody Component attached.

Duration – The duration of the tween

SetSpeedBased – If isSpeedBased is TRUE sets the tween as speed based (the duration will represent the number of units/degrees the tween moves x second).
NOTE: if you want your speed to be constant, also set the ease to Ease.Linear.

StartDelay – Set a delayed startup for the tween

Axis – The axis around which the spiral will rotate.

SpiralMode – The type of spiral movement.

Speed – Speed of the rotations.

Frequency – Frequency of the rotation. Lower values lead to wider spirals.

Depth – Indicates how much the tween should move along the spiral's axis.

Snapping – If TRUE the tween will smoothly snap all values to integers.

EVENTS

StartEvent – Playmaker Event to trigger when the tween starts

FinishEvent – Playmaker Event to trigger when the tween ends

FinishImmediately – If TRUE this action will finish immediately, if FALSE it will finish when the tween is complete.

TWEEN ID

TweenIdType – Select the source for the tween ID

StringAsId – Use a String as the tween ID

TagAsId – Use a Tag as the tween ID

EASE SETTINGS

SelectedEase – Select the source for the ease (ease type or animation curve)

EaseType – Sets the ease of the tween. If applied to a Sequence instead of a Tweener, the ease will be applied to the whole Sequence as if it was a single animated timeline. Sequences always have Ease.Linear by default, independently of the global default ease settings.

AnimationCurve – Set custom animation curve for the tween

GameObject – reference to a gameObject with a TextMeshProUGUI Component attached.

To – The end value to reach

SetRelative – If setRelative is TRUE sets the tween as relative (the endValue will be calculated as startValue + endValue instead of being used directly). In case of Sequences, sets all the nested tweens as relative. IMPORTANT: Has no effect on Reverse Options, since in that case you directly choose if the tween isRelative or not in the settings below

Duration – The duration of the tween

SetSpeedBased – If isSpeedBased is TRUE sets the tween as speed based (the duration will represent the number of units/degrees the tween moves x second). NOTE: if you want your speed to be constant, also set the ease to Ease.Linear.

StartDelay – Set a delayed startup for the tween

REVERSE OPTIONS

PlayInReverse – Changes a TO tween into a FROM tween: sets the current target's startValue as the tween's endValue then immediately sends the target to the previously set endValue.

SetReverseRelative – If TRUE the FROM value will be calculated as relative to the current one

EVENTS

StartEvent – Playmaker Event to trigger when the tween starts

FinishEvent – Playmaker Event to trigger when the tween ends

FinishImmediately – If TRUE this action will finish immediately, if FALSE it will finish when the tween is complete.

TWEEN ID

TweenIdType – Select the source for the tween ID

StringAsId – Use a String as the tween ID

TagAsId – Use a Tag as the tween ID

EASE SETTINGS

SelectedEase – Select the source for the ease (ease type or animation curve)

EaseType – Sets the ease of the tween. If applied to a Sequence instead of a Tweener, the ease will be applied to the whole Sequence as if it was a single animated timeline. Sequences always have Ease.Linear by default, independently of the global default ease settings.

AnimationCurve – Set custom animation curve for the tween

LOOP SETTINGS

Loops – Number of loops. Setting loops to -1 will make the tween loop infinitely.

LoopType – Sets the looping options (Restart, Yoyo, Incremental) for the tween.

SPECIAL SETTINGS

AutoKillOnCompletion – If autoKillOnCompletion is set to TRUE the tween will be killed as soon as it completes, otherwise it will stay in memory and you'll be able to reuse it. (default TRUE)

Recyclable – Sets the recycling behaviour for the tween. If you don't set it then the default value (set either via DOTween.Init or DOTween.defaultRecyclable) will be used. (default FALSE)

UpdateType – Sets the type of update (Normal, Late or Fixed) for the tween and eventually tells it to ignore Unity's timeScale. UpdateType.Normal: Updates every frame during Update calls. UpdateType.Late: Updates every frame during LateUpdate calls. UpdateType.Fixed: Updates using FixedUpdate calls. (default UpdateType.Normal)

IsIndependentUpdate – If TRUE the tween will ignore Unity's Time.timeScale. NOTE: independentUpdate works also with UpdateType.Fixed but is not recommended in that case (because at timeScale 0 FixedUpdate won't run). (default FALSE)

DEBUG OPTIONS

DebugThis – Will print in the Debug.Log, the gameObject name this FSM is attached to, the FSM name and the State name that issued this action.

Tweens a TextMeshProUGUI's fontSize to the given value.

GameObject – reference to a gameObject with a TextMeshProUGUI Component attached.

To – The end value to reach

RichTextEnabled – If TRUE (default), rich text will be interpreted correctly while animated, otherwise all tags will be considered as normal text

ScrambleMode – The type of scramble mode to use, if any. If different than ScrambleMode.None the string will appear from a random animation of characters, otherwise it will compose itself regularly. None(default): no scrambling will be applied. All / Uppercase / Lowercase / Numerals: type of characters to be used while scrambling. Custom: will use the custom characters in scrambleChars.

ScrambleChars – A string containing the characters to use for custom scrambling. Use as many characters as possible (minimum 10) because DOTween uses a fast scramble mode which gives better results with more characters.

SetRelative – If setRelative is TRUE sets the tween as relative (the endValue will be calculated as startValue + endValue instead of being used directly). In case of Sequences, sets all the nested tweens as relative. IMPORTANT: Has no effect on Reverse Options, since in that case you directly choose if the tween isRelative or not in the settings below

StartDelay – Set a delayed startup for the tween

REVERSE OPTIONS

PlayInReverse – Changes a TO tween into a FROM tween: sets the current target's startValue as the tween's endValue then immediately sends the target to the previously set endValue.

SetReverseRelative – If TRUE the FROM value will be calculated as relative to the current one

EVENTS

StartEvent – Playmaker Event to trigger when the tween starts

FinishEvent – Playmaker Event to trigger when the tween ends

FinishImmediately – If TRUE this action will finish immediately, if FALSE it will finish when the tween is complete.

TWEEN ID

TweenIdType – Select the source for the tween ID

StringAsId – Use a String as the tween ID

TagAsId – Use a Tag as the tween ID

EASE SETTINGS

SelectedEase – Select the source for the ease (ease type or animation curve)

EaseType – Sets the ease of the tween. If applied to a Sequence instead of a Tweener, the ease will be applied to the whole Sequence as if it was a single animated timeline. Sequences always have Ease.Linear by default, independently of the global default ease settings.

AnimationCurve – Set custom animation curve for the tween

LOOP SETTINGS

Loops – Number of loops. Setting loops to -1 will make the tween loop infinitely.

LoopType – Sets the looping options (Restart, Yoyo, Incremental) for the tween.

SPECIAL SETTINGS

AutoKillOnCompletion – If autoKillOnCompletion is set to TRUE the tween will be killed as soon as it completes, otherwise it will stay in memory and you'll be able to reuse it. (default TRUE)

Recyclable – Sets the recycling behaviour for the tween. If you don't set it then the default value (set either via DOTween.Init or DOTween.defaultRecyclable) will be used. (default FALSE)

UpdateType – Sets the type of update (Normal, Late or Fixed) for the tween and eventually tells it to ignore Unity's timeScale. UpdateType.Normal: Updates every frame during Update calls. UpdateType.Late: Updates every frame during LateUpdate calls. UpdateType.Fixed: Updates using FixedUpdate calls. (default UpdateType.Normal)

IsIndependentUpdate – If TRUE the tween will ignore Unity's Time.timeScale.

NOTE: independentUpdate works also with UpdateType.Fixed but is not recommended in that case (because at timeScale 0 FixedUpdate won't run). (default FALSE)

DEBUG OPTIONS

DebugThis – Will print in the Debug.Log, the gameObject name this FSM is attached to, the FSM name and the State name that issued this action.

Tweens a TextMeshPro faceColor's alpha to the given value.

GameObject – reference to a gameObject with a TextMeshPro Component attached.

To – The end value to reach

RichTextEnabled – If TRUE (default), rich text will be interpreted correctly while animated, otherwise all tags will be considered as normal text

ScrambleMode – The type of scramble mode to use, if any. If different than ScrambleMode.None the string will appear from a random animation of characters, otherwise it will compose itself regularly. None(default): no scrambling will be applied. All / Uppercase / Lowercase / Numerals: type of characters to be used while scrambling. Custom: will use the custom characters in scrambleChars.

ScrambleChars – A string containing the characters to use for custom scrambling. Use as many characters as possible (minimum 10) because DOTween uses a fast scramble mode which gives better results with more characters.

SetRelative – If setRelative is TRUE sets the tween as relative (the endValue will be calculated as startValue + endValue instead of being used directly). In case of Sequences, sets all the nested tweens as relative. IMPORTANT: Has no effect on Reverse Options, since in that case you directly choose if the tween isRelative or not in the settings below

Duration – The duration of the tween

SetSpeedBased – If isSpeedBased is TRUE sets the tween as speed based (the duration will represent the number of units/degrees the tween moves x second). NOTE: if you want your speed to be constant, also set the ease to Ease.Linear.

StartDelay – Set a delayed startup for the tween

REVERSE OPTIONS

PlayInReverse – Changes a TO tween into a FROM tween: sets the current target's startValue as the tween's endValue then immediately sends the target to the previously set endValue.

SetReverseRelative – If TRUE the FROM value will be calculated as relative to the current one

EVENTS

StartEvent – Playmaker Event to trigger when the tween starts

FinishEvent – Playmaker Event to trigger when the tween ends

FinishImmediately – If TRUE this action will finish immediately, if FALSE it will finish when the tween is complete.

TWEEN ID

TweenIdType – Select the source for the tween ID

StringAsId – Use a String as the tween ID

TagAsId – Use a Tag as the tween ID

EASE SETTINGS

SelectedEase – Select the source for the ease (ease type or animation curve)

EaseType – Sets the ease of the tween. If applied to a Sequence instead of a Tweener, the ease will be applied to the whole Sequence as if it was a single animated timeline. Sequences always have Ease.Linear by default, independently of the global default ease settings.

AnimationCurve – Set custom animation curve for the tween

LOOP SETTINGS

Loops – Number of loops. Setting loops to -1 will make the tween loop infinitely.

LoopType – Sets the looping options (Restart, Yoyo, Incremental) for the tween.

SPECIAL SETTINGS

AutoKillOnCompletion – If autoKillOnCompletion is set to TRUE the tween will be killed as soon as it completes, otherwise it will stay in memory and you'll be able to reuse it. (default TRUE)

Recyclable – Sets the recycling behaviour for the tween. If you don't set it then the default value (set either via DOTween.Init or DOTween.defaultRecyclable) will be used. (default FALSE)

UpdateType – Sets the type of update (Normal, Late or Fixed) for the tween and eventually tells it to ignore Unity's timeScale. UpdateType.Normal: Updates every frame during Update calls. UpdateType.Late: Updates every frame during LateUpdate calls. UpdateType.Fixed: Updates using FixedUpdate calls. (default UpdateType.Normal)

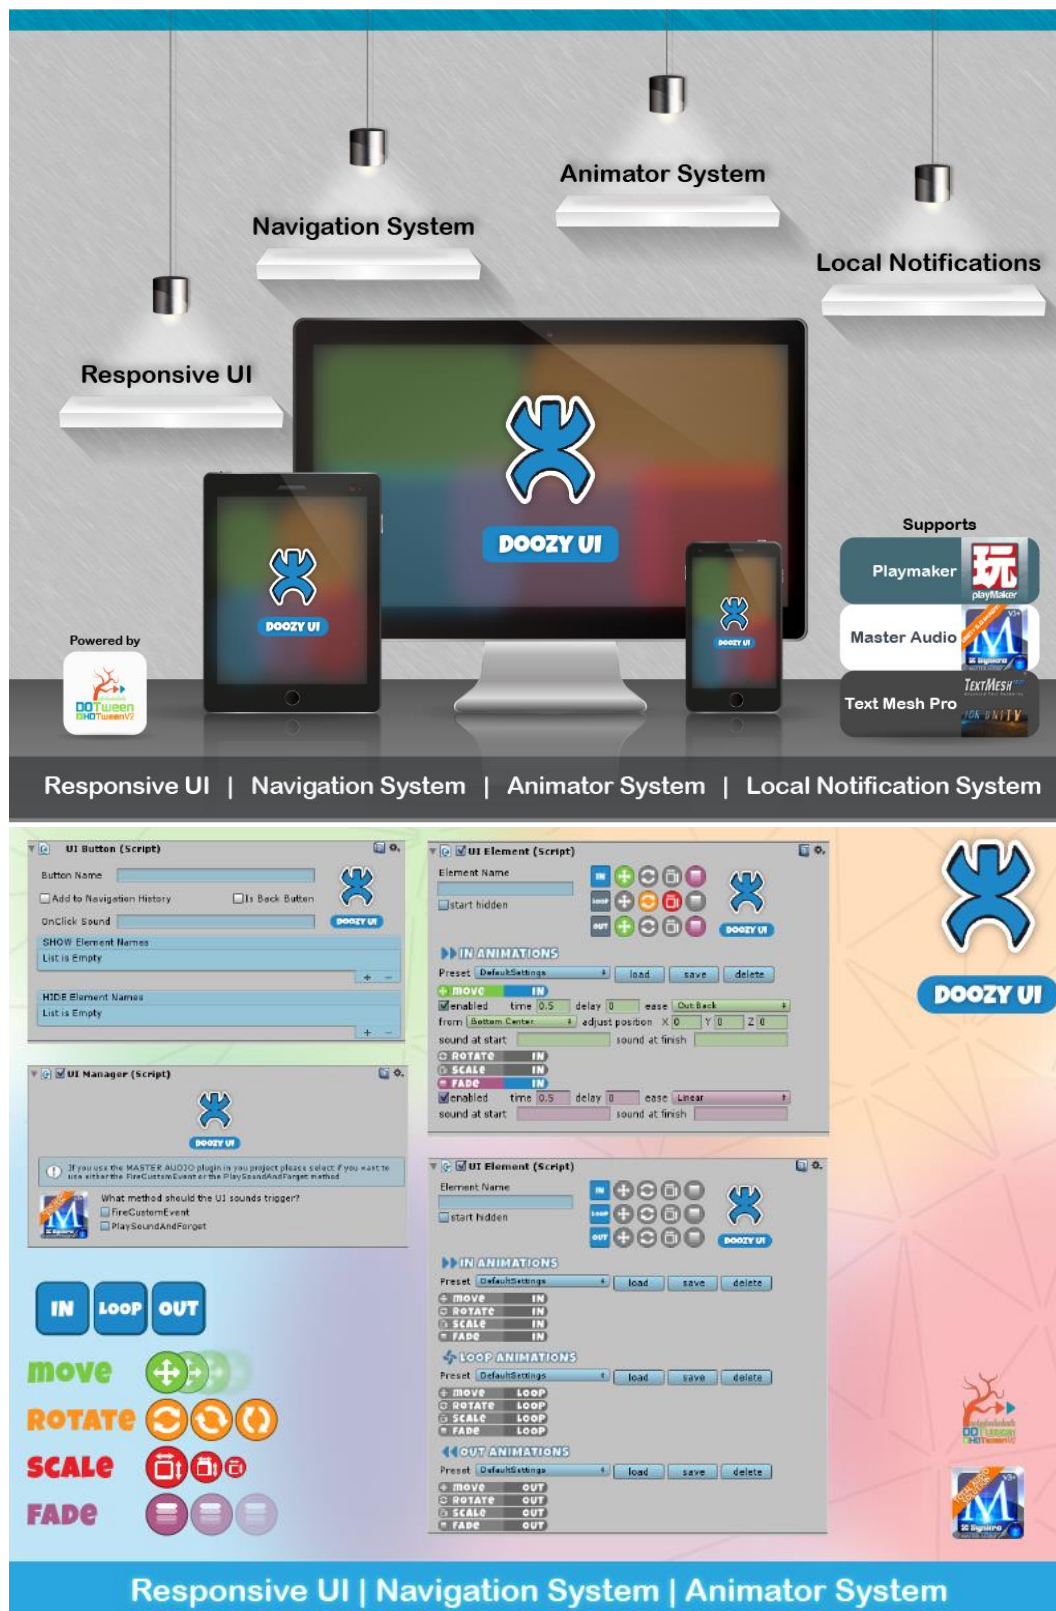

IsIndependentUpdate – If TRUE the tween will ignore Unity's Time.timeScale. NOTE: independentUpdate works also with UpdateType.Fixed but is not recommended in that case (because at timeScale 0 FixedUpdate won't run). (default FALSE)

DEBUG OPTIONS

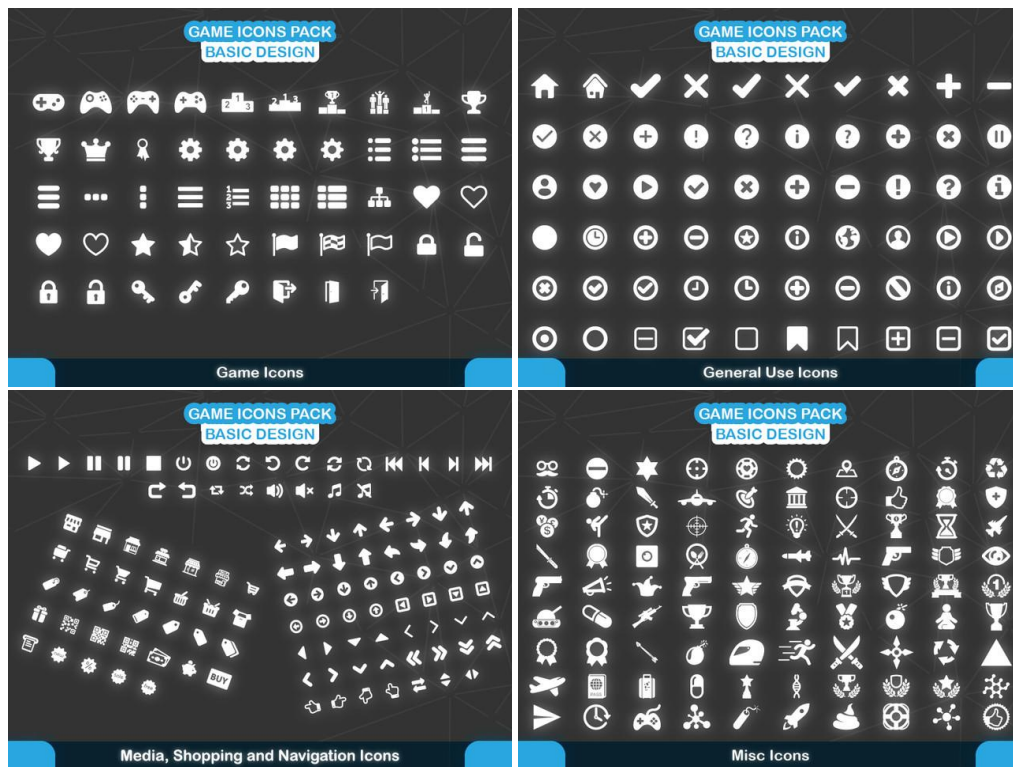

DebugThis – Will print in the Debug.Log, the gameObject name this FSM is attached to, the FSM name and the State name that issued this action.
